This readme file contains instructions on how to run the concurrent programming project.

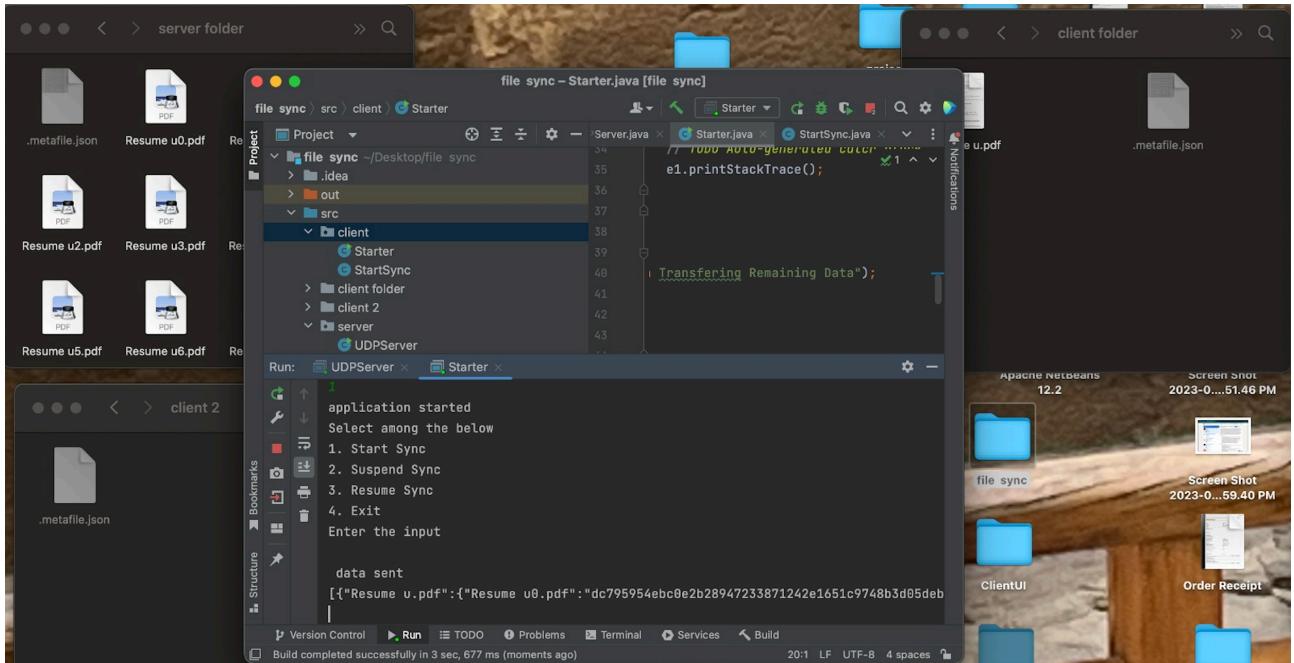

1. Step 1:

From filesync project right click on ‘UDPServer.java’ and choose run as java application to start the server and do the same with the ‘Starter.java’. This will provide the user with options in the command line such as start sync, suspend sync, resume sync and exit.

2. Step 2:

The user has to select start sync from the given options and the files in the client folder will start syncing with the server.

3. Step 3:

To sync the files with the second client go to the client 2 folder and start the ‘Starter.java’. The files from the server gets synced with client 2.
